

In summary

- Many benefits to having an interactive GUI generate reproducible code (transparency, permanence, automation)
- **shinymeta**: new R package for capturing logic in a Shiny app and exposing it as code that can be run outside of Shiny
- Add **shinymeta** integration to a Shiny app by:
 1. Identify and capture domain logic
 2. Mark reactive reads with `..()`
 3. Export domain logic with `expandChain()`

Acknowledgments

Many people have provided motivation, inspiration, and ideas that have lead to **shiny**meta.

Special thanks to:

- Adrian Waddell for inspiring the over-arching metaprogramming approach
- Doug Kelkhoff for his work in **scriptgloss**
